

ABSTRACT

In view of the demand to replace wood pulp to preserve forests which is brought about by the recent trend to preserve natural resources from the terrestrial warming or the environmental pollution, the present invention aims to provide a yarn using cellulose-based filament yarn made from bamboo.

The above-mentioned object can be achieved by a fiber yarn which is a yarn containing a filament of cellulose-based fiber made from a bamboo having a thickness of 10 to 600 dtex and number of twist of 0 to 3,000 T/M.
